                                                                                                                                                                                                                                                                                                            The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC used muon molecules, e.g. cell proliferative disorders, associated CC autoimmune/inflammatory disorder, developmental disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the CC invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly form WIPO at www.wipo.int/pct/en/sequences/listing.htm

                                                        The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dith) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, associated autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mooney EM,

                                                                                                                                                                                                                         The invention relates to novel diagnostic and therapeutic polynucleotides control selected from one of the 2722 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, endocrine autoimmune/inflammatory disorder, developmental disorder, endocrine disorder, neurological disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithp conflections caused by virus, bacteria, fungi or parasite. The dithp conflections caused by virus, bacteria, fungi or parasite. The dithp conflections caused by virus, bacteria, fungi or parasite. The dithp confletes may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline polymorphisms, as molecular weight markers, and for somatic or germline invention. Note: The sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly forms of the printed specification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                               The invention relates to novel human metal binding proteins (MBP) and common the continuous polynucleotides. The MBPs can be expressed by standard common the continuous proteins of the polypeptides and polynucleotides are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of MBP, such as cell proliferative (e.g. cancer, atheroscletosis), neurological (e.g. proliferative (e.g. cancer, atheroscletosis), neurological (e.g. AIDS, callergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders, or infections. These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of MBP. The MBP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. An microarray comprising different nucleotide molecules affixed at distinct physical locations on a solid substrate, where at least one nucleotide sequence specifically hybridizable with at least 30 contiguous nucleotides of the protein interactions, drug-target interactions, and gene expression cropical sequence represents a human MBP.

                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                      The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be cCC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC disorder, neurological disorder, developmental disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC invention. Note: The sequence represents a dithp protein of the CC convention. Note: The sequence represents a dithp protein of the CC convention. Note: The sequence represents a dithp protein of the CC convention. Note: The sequence represents a dithp protein of the CC convention. Note: The sequence represents a dithp protein of the CC convention. Note: The sequence represents a dithp protein of the CC convention. Note: The sequence represents a dithp protein of the CC convention.

                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel diagnostic and therapeutic polynucleotides celected from one of the 2722 sequences defined in the specification. A composition of the invention may have a use in gene therapy. The human composition diagnostic and therapeutic polynucleotides (dith) or polypeptides may be used to diagnose a particular condition, disease or disorder associated with human molecules, e.g. cell proliferative disorders, and corine continues inflammatory disorders, gastrointestinal disorder, endocrine confidence of the continuance inflammatory disorders, gastrointestinal disorders, or infections caused by virus, bacteria, fungi or parasite. The dithing completes may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this partent is not represented in the printed specification, but was obtained in electronic format directly continued to the printed specification, but was obtained in electronic format directly continued to the continued to the printed specification, but was obtained in electronic format directly continued to the continued to t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Harths...

           No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                Query

                                                                                                                                                                                                                 NIH - Zebrafish Gene Collection (ZGC) project;
Submitted (OCT-2005) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- SUBCELLULAR LOCATION: Nucleus (By similarity).
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
-!- CAUTION: Glu-37 is present instead of the conserved Lys which expected to be an active site residue. Lys-38 may fulfill that

Patent No. 5986067
Patent No. 5986067
GENERAL INFORMATION:
APPLICANT: FUNK, Walter D.
APPLICANT: MACGILLIVRAY, ROSS T.A.
APPLICANT: MACGILLIVRAY, ROSS T.A.
APPLICANT: MOCOMORTH, ROBERT C.
TITLE OF INVENTION: RECOMBINANT TRANSFERRINS, TRANSFERRIN HALF-
TITLE OF INVENTION: MOLECULES AND MUTANTS THEREOF
NUMBER OF SEQUENCES: 7
CORRESPONDENCE ADDRESS:
ADDRESSE: LAHIVE & COCKFIELD
